

Many no-cool calls start with simple issues like a clogged filter, thermostat setting problems or blocked airflow. A good first step is checking the thermostat mode, [Gee Heating & Air](#) replacing the filter and making sure supply and return vents are open.(Image: http://www.imageafter.com/image.php?image=b7vehicles_water000.jpg&dl=1) When appropriate, we also recommend an AC tune-up or seasonal HVAC checkup to address buildup and small issues that can lead to breakdowns. For older systems, we can also discuss AC replacement, heat pump service options or energy-saving HVAC upgrades depending on goals and budget. Reach out to share the symptoms and timing so we can help plan the right service visit.
