

Add Item

The Add Item feature enables operators to create and manage products and services within the system efficiently. This module is designed to support accurate item setup for gameplay, food and beverages, accessories, or additional services offered by the club.

Operators can add item details, such as the item name, category, pricing, and availability. Items can be configured with flexible pricing rules, tax settings, and promotional options to match business requirements and sales strategies.

With a simple and intuitive setup process, operators can easily update or manage item listings in real time. Once added, all items are seamlessly integrated with the POS system, billing process, and reporting modules, ensuring accurate transactions, smooth sales operations, and consistent inventory control.

11. Add Item

Go to Operation > Click Setting (the blue circle on below) > Go to Items

Details to Set Up Table:

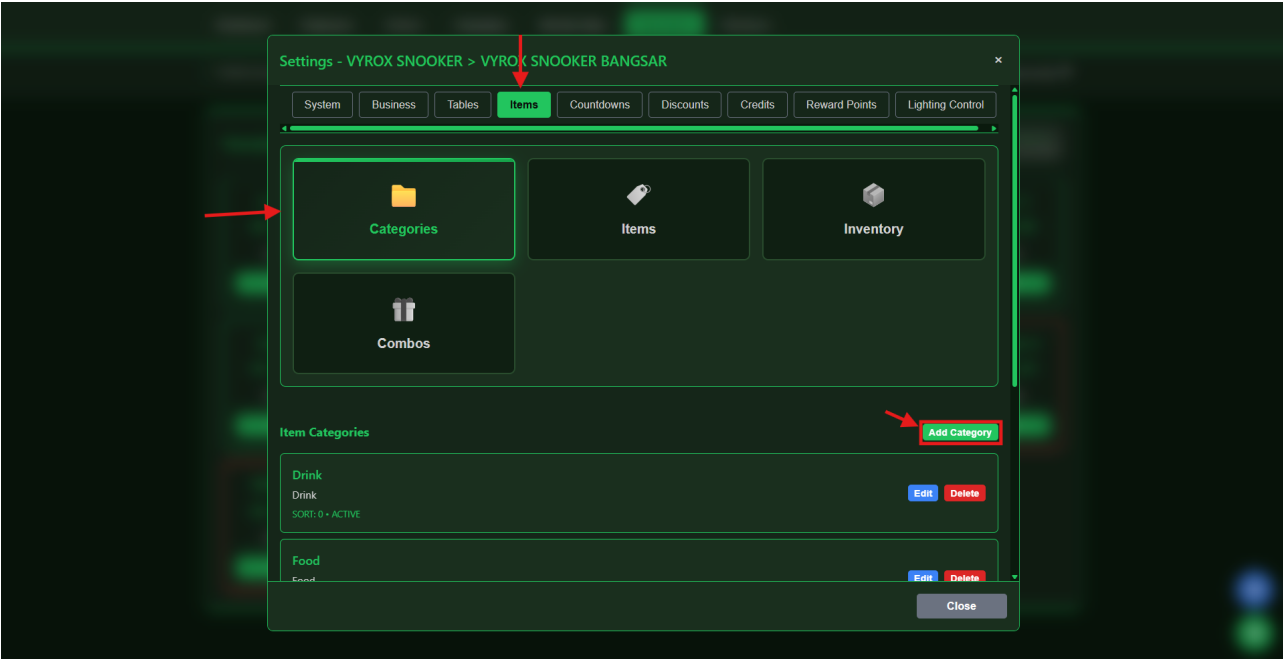

1. Categories
