

Add Stock

The Add Stock feature allows operators to record and manage inventory quantities efficiently within the system. This module is designed to support accurate stock tracking for food and beverages, retail items, accessories, and operational supplies.

Operators can add stock by defining item quantities, stock locations and updating reasons, such as new deliveries, adjustments, or returns. The system ensures real-time inventory updates to maintain accurate availability and prevent stock discrepancies.

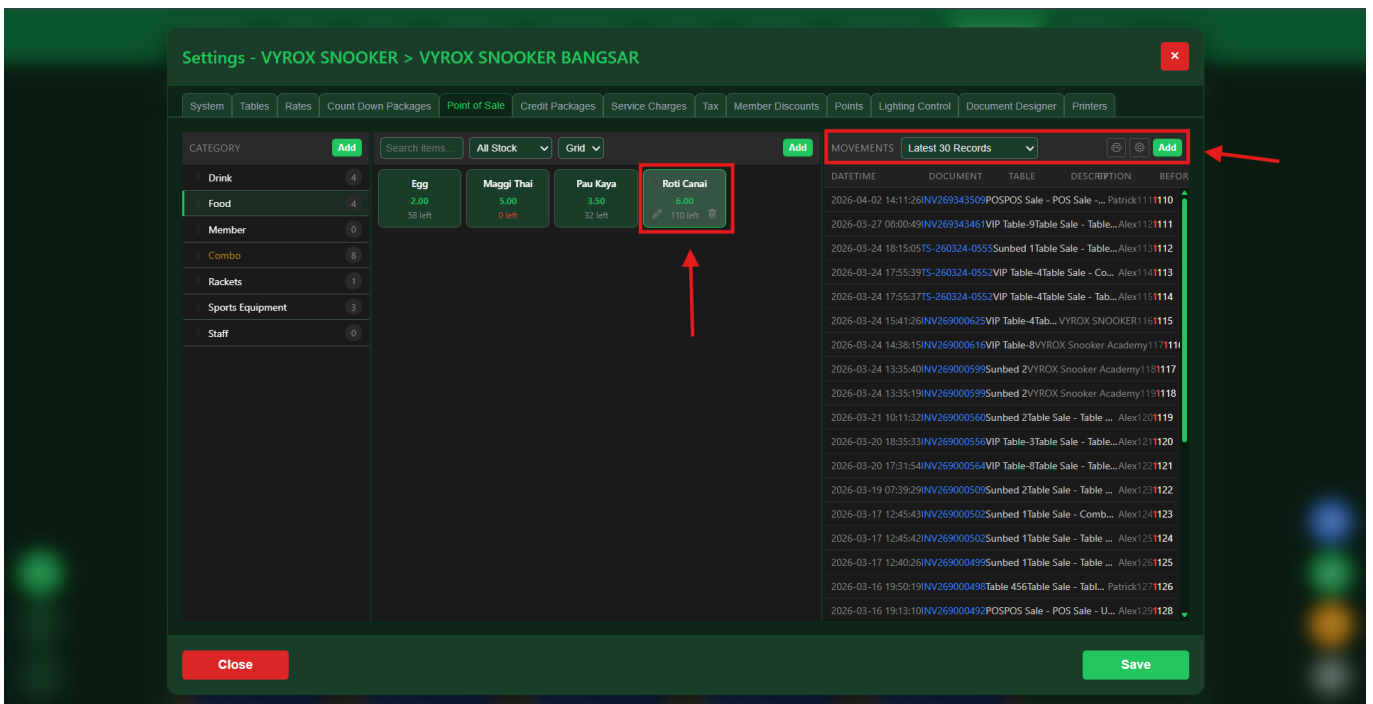

With a streamlined and user-friendly process, operators can easily monitor stock levels and manage inventory updates as needed. After being recorded, all stock information is smoothly connected with the POS system, sales transactions, and reporting tools, making sure inventory is managed consistently and operations are clear.

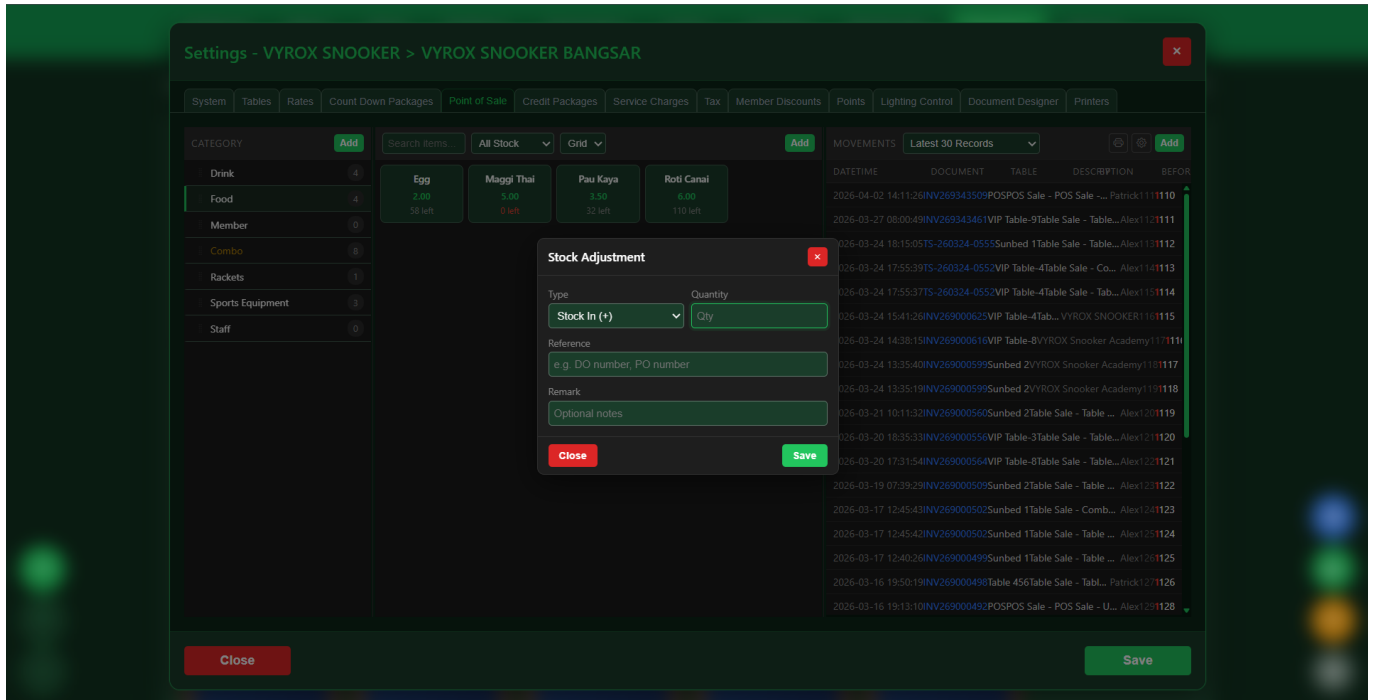

Inventory

Go to 'Operation' > Click 'Setting' (the Silver circle below). > Go to 'Point of Sale' > Click item > Click 'Add'

Details to Set Up the Table:

1. Click Item
2. Click Add
3. Put Quantity stock
4. Make Reference (Optional)
5. Make a Note (Optional)
