

Create Account

The Create Account feature allows administrators and operators to register and manage user accounts within the system in a structured and secure manner. This module is designed to support different user roles and access levels, ensuring proper control and accountability across operations.

Users can create accounts by defining user details, assigning roles, and setting permission levels according to operational requirements. The system supports role-based access control to ensure that each user can only access features relevant to their responsibilities.

With an intuitive and guided setup process, administrators can quickly create, update, or manage accounts to support smooth onboarding and efficient system usage. Once created, user accounts are seamlessly integrated with the POS system, booking modules, and operational controls to ensure a consistent and secure user experience across the platform.
