

Create Table

The Create Table feature enables snooker club operators to efficiently set up and manage tables within the system with flexibility and precision. This module is designed to support various table types, game modes, and operational requirements, allowing businesses to structure their table setup according to their specific needs.

Operators can create table names, assign table categories, and define table attributes such as usage method and supported game types. Each table can be configured to work seamlessly with different pricing models, ensuring accurate tracking and control at the table level.

With a streamlined and intuitive setup process, operators can quickly create, update, or manage table availability to support smooth operations, optimise space utilisation, and enhance the overall customer experience. Once created, all tables are fully integrated with the POS system, booking workflow, and automated table light control for real-time operational efficiency.

Add Table

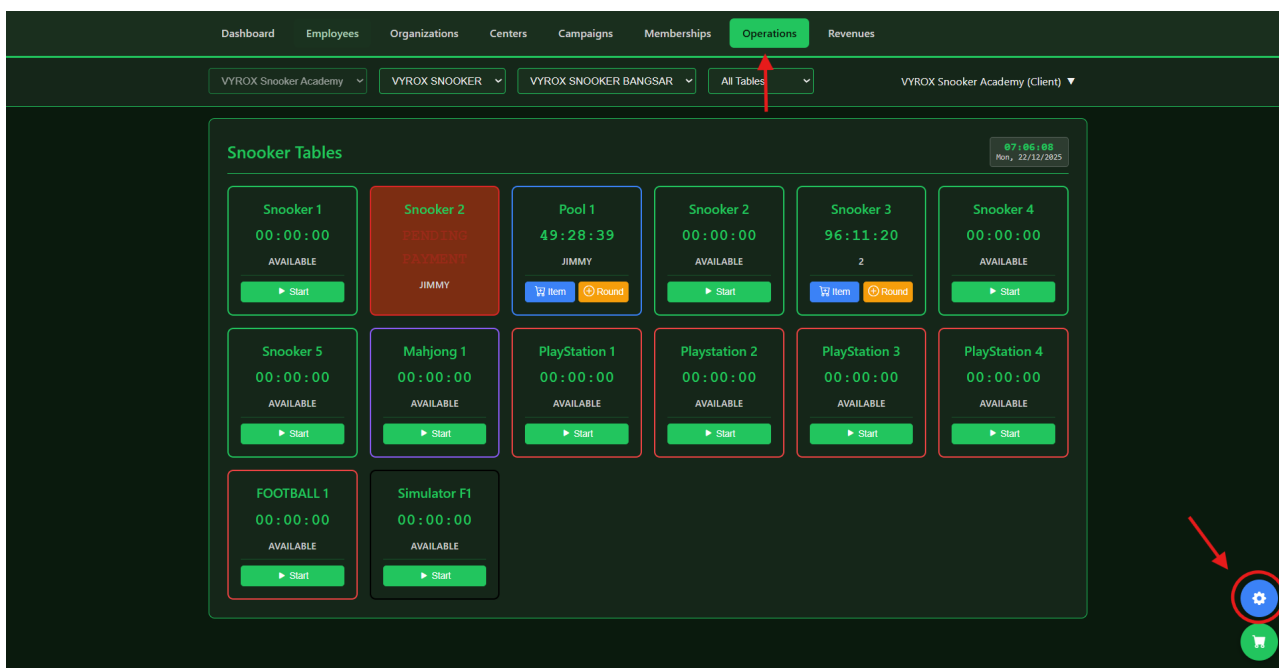

Go to Operation > Click Setting (the blue circle on below) > Go to Tables

Details to Set Up Table:

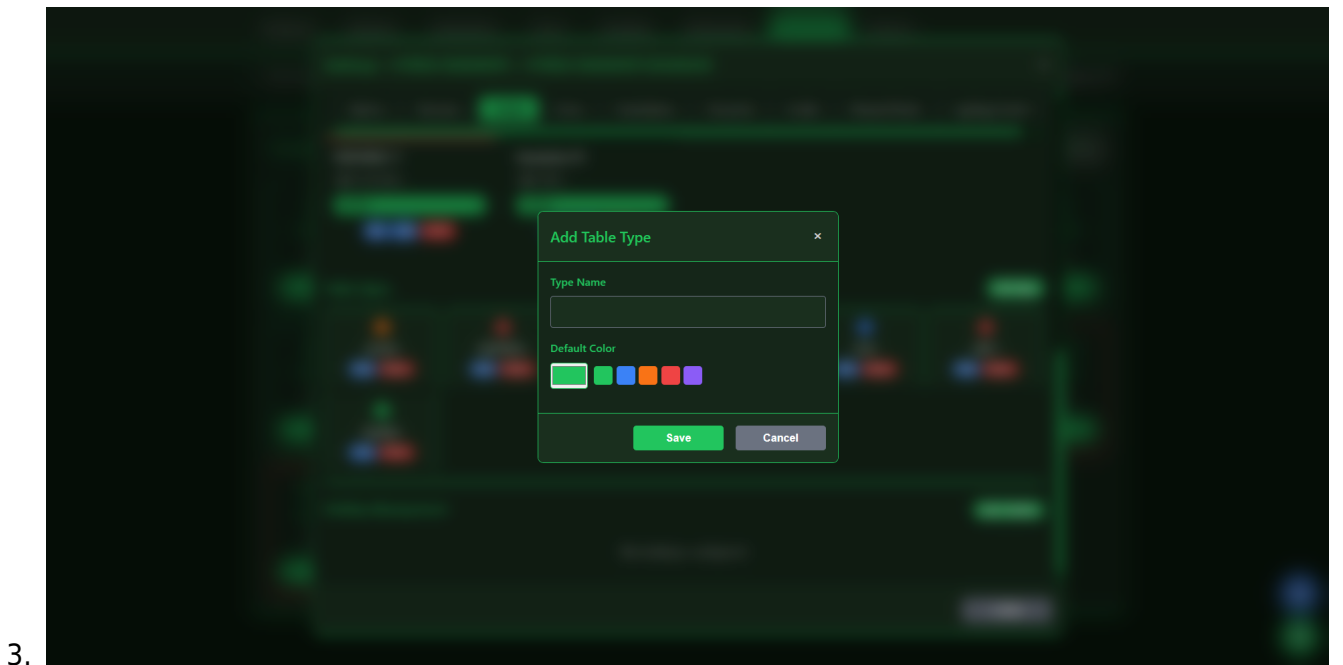

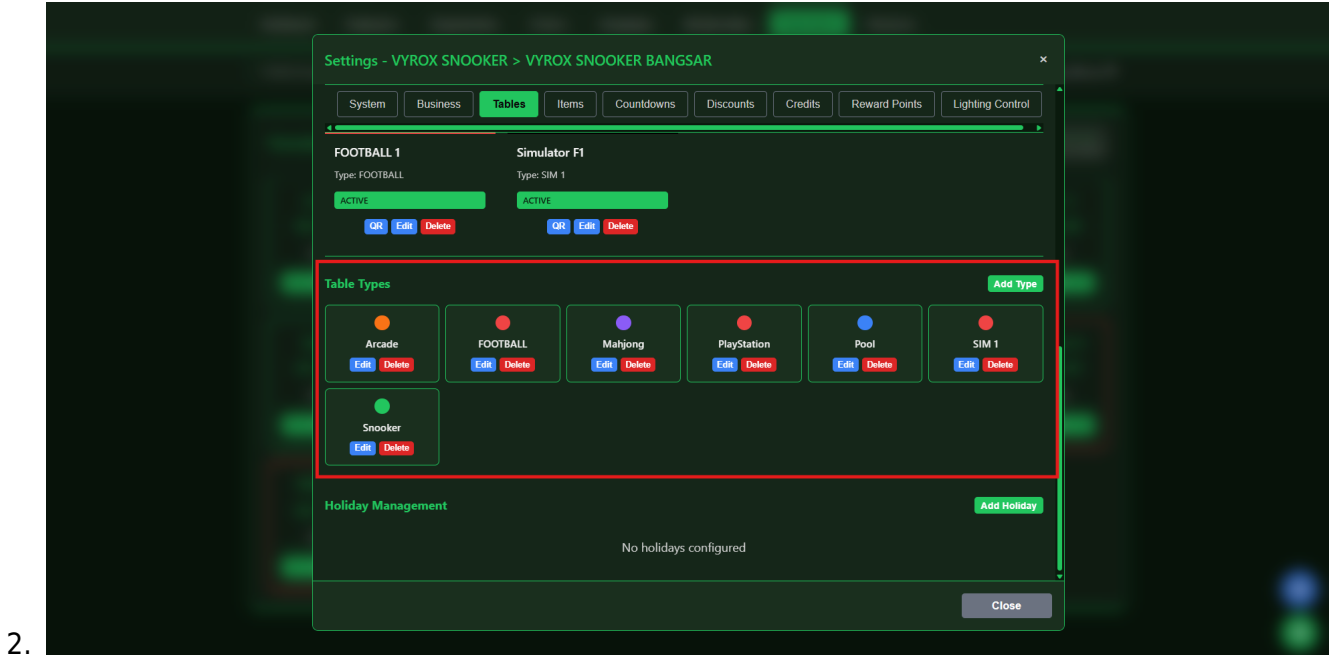

1. Add type table
2. Go to table management and add a table.

Step 1:

Go to Type table > write Type Name > Choose Default Color

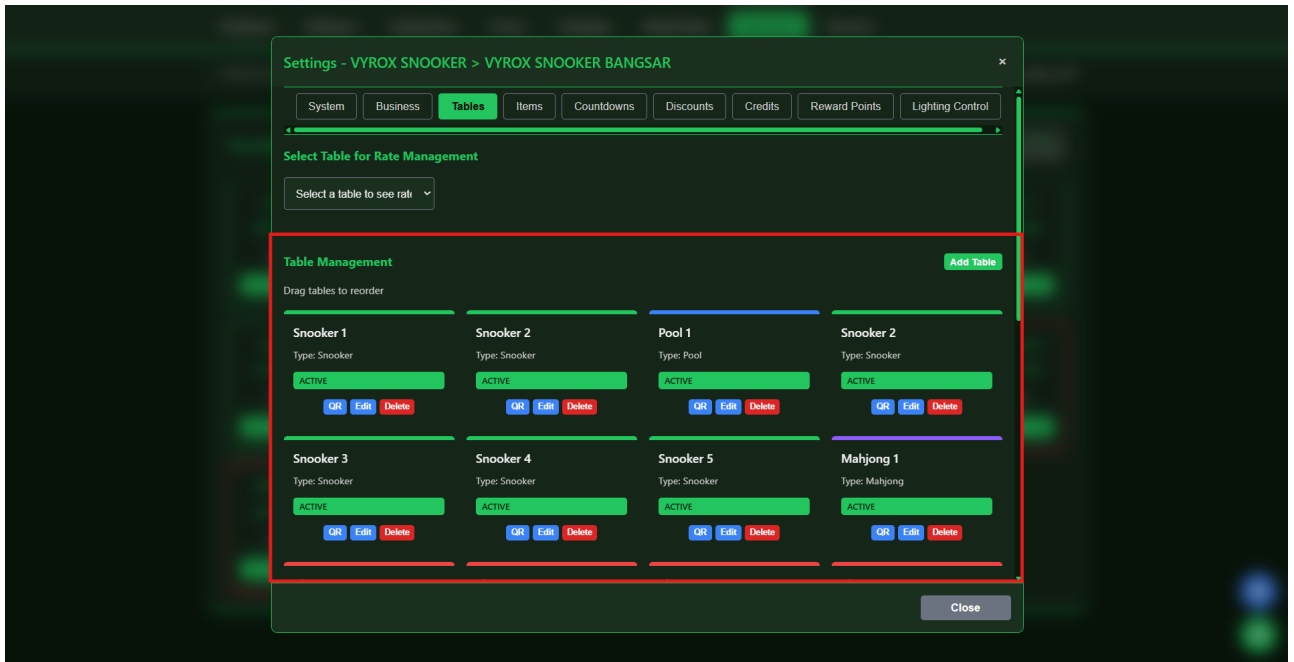

1.

Step 2:

Go to Table Management > Add Table > Table Name > Table Type > Custom Color (Click Use Type Default) > Select Lighting Control Device > Associated Lighting Control Channel

1.

2.
