

A good starting point is a foundation inspection and estimates process that documents elevation changes and crack patterns. Many symptoms, such as differential movement cracks, gaps around openings and sinking [AAA Foundation Service specialists](#) symptoms, can indicate where the structure is moving and how severe the movement may be. (Image: <https://windsorinsulation.co/wp-content/uploads/2023/04/db167645af037f687c1f5b66e4f3f97b-insulation-installation-spray-foam.jpg>) Inspection results also help identify contributing factors like poor drainage, downspouts dumping near the slab or negative grading
