

Woodbridge homeowners often notice heating issues when temperatures drop fast. A furnace that will not start, short cycles, or blows cool air can be caused by simple problems like a dirty filter, thermostat settings, or a tripped safety switch. For more complex issues, diagnostics can identify ignition problems, airflow restrictions, or components that are wearing out.(Image: <https://i.pinimg.com/originals/3c/76/84/3c768454c1b31ea29e9b063644631db5.jpg>) Furnace repair Woodbridge service is usually most effective when it starts with a clear symptom check and a full system inspection.
