

Point

The Point feature enables clubs to implement a structured loyalty system that rewards customers based on their activity and spending. This module is designed to encourage repeat visits, increase engagement, and strengthen long-term customer relationships.

Operators can configure point-earning rules based on gameplay, purchases, membership tiers, or promotional campaigns. Points can be customised with flexible accumulation rates, validity periods, and redemption options to suit different business strategies.

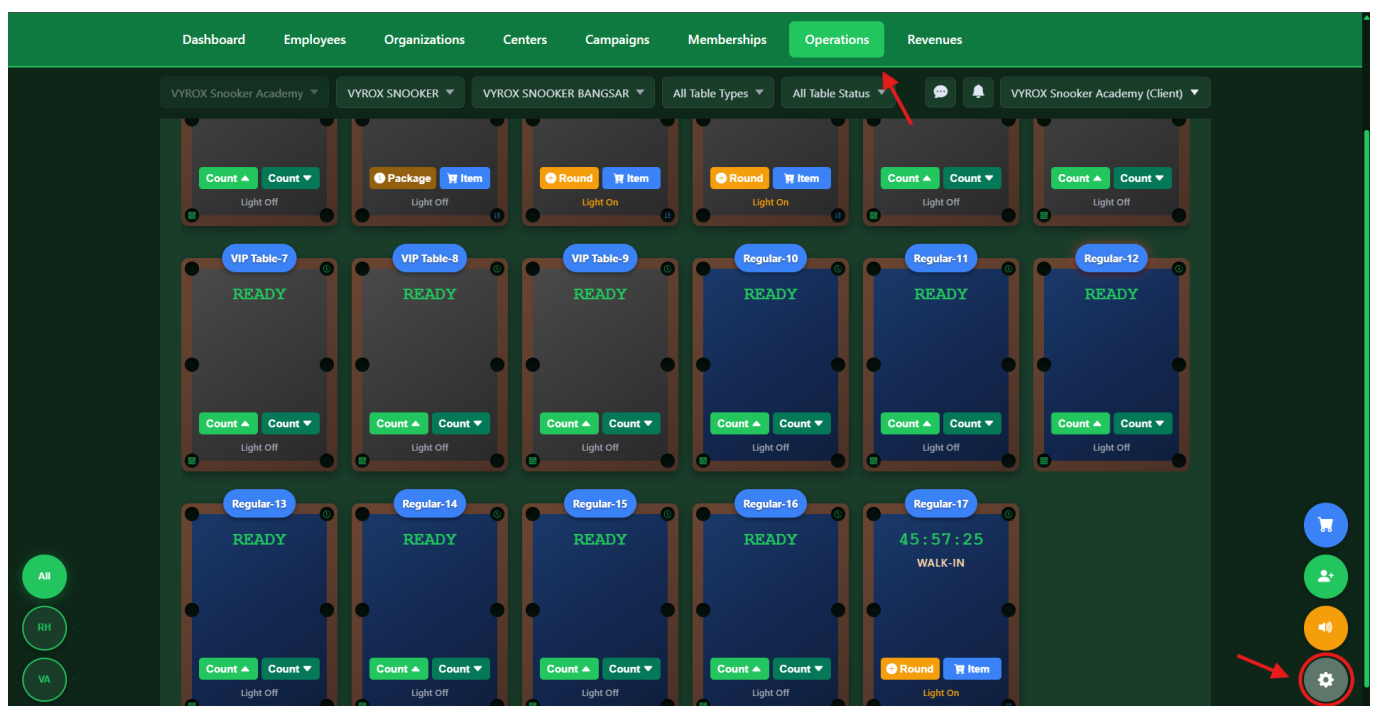

With an intuitive management interface, operators can easily monitor, adjust, and optimise reward point settings in real time. Once activated, the Reward Point system is fully integrated with the POS platform, billing process, and member accounts, ensuring accurate tracking, seamless redemption, and a consistent loyalty experience.

Set Points

Go to Operation > Click Setting (the Silver circle below). > Go to Reward Points

Details to Set Point:

- 100 points = 1.00 cash value
- Minimum 100 points needed to redeem

Points Earning Rate Schedules

About Earning Rate Schedules:
Set different point earning rates for specific times and days. For example, give double points during happy hours or weekends. If no specific schedule matches the current time, the center default rate will be used.

No earning rate schedules configured
