

Management User Guide: Visitor Management System

1. Introduction

This guide is crafted to optimize the process of managing visitors. It provides step-by-step instructions for utilizing the visitor management system, enabling you to track, monitor, and enhance the overall experience for guests and staff alike.

2. Visitor Management

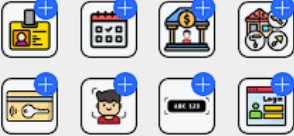

This section offers a comprehensive overview of the tools and features available for efficient visitor management. From check-in processes to visitor logs, all functionalities are designed to streamline your operations.

2.1. Add New SuperPASS Door Device

The SuperPASS Door Device is an advanced access control system installed at building entry points. Visitors and authorized personnel can use a card or QR code to scan and gain secure access to the building. This system ensures a smooth, contactless entry experience while maintaining high security.

To Add New SuperPASS Door Device:

Go to **Settings > VYROX AIoT Devices > SuperPASS-Door > New SuperPASS-Door Device > Fill in details > Add**

New SuperPASS-Door Device

SuperPASS-Door Controller Name: Room Controller

Number of Doors Supported: 2

Channel 1 (Relay 1)

Label Name (In): DoorIn1

Label Name (Out): DoorIn2

This is an entrance, exit or perimeter access point for the premise, thus update the visitor status to "Checked-In" or "Checked-Out" respectively upon successful grant of access

Enable "Anti-Passback" (access will not be granted if a visitor attempts to enter an area again without first leaving the area)

Channel 2 (Relay 2)

Label Name (In): DoorOut1

Label Name (Out): DoorOut2

This is an entrance, exit or perimeter access point for the premise, thus update the visitor status to "Checked-In" or "Checked-Out" respectively upon successful grant of access

Enable "Anti-Passback" (access will not be granted if a visitor attempts to enter an area again without first leaving the area)

Cloud Server

Cloud Server API Key

SuperPASS-Door Controller Serial Number

Search

Local Server

Add

Details include:

- SuperPASS-Door Controller Name
- Number of Door Supported (No of Channel = No of Door)
- Label Name of each channel (In & Out)
- Cloud Server

For each Channel/ Door Supported Management can choose to enable :

- The door as an entrance, exit, or perimeter access point for the premises. This means , upon successful access, the visitor status will be updated to "Checked-In" or "Checked-Out" accordingly.
- The "Anti-Passback" feature .This prevents access if a visitor attempts to re-enter an area without first leaving.

For the cloud server :

- Cloud Server API Key is taken from : Server
- SuperPASS-Door Controller Serial Number : Door access application

If Search shows X mark . This means the server cannot find the Controller.

SuperPASS-Door Controller Serial Number

 

To fix it :

1. Check Serial Number
2. Check Ports and IP
3. Use Debug Tools

Once controller is detected , Search will show green tick mark.

SuperPASS-Door Controller Serial Number

Click **Add** when finish .

2.2. Add New Visitor Type

Go to **Settings > Visitor > Visitor Types > New Visitor Type > Fill in details > Add**

Fill in the Required Details:

1) Visitor Type Name

2) Same-Day Appointments:

- **Always Allow:** Enable same-day appointment scheduling.
- **Minimum Lead Time:** Specify the minimum number of minutes required before the requested Validity Start-Time.
- **Disallow:** If same-day appointments are not allowed, choose to either: Allow but require approval or Disallow it entirely.

3) Future Appointments:

- Decide if visitors can schedule appointments for future dates (from the next day onward).

4) Appointment Booking Windows :

- Set When the visitor type can be requested

5) Visitor Pass Validity :

- Set the duration for which the visitor pass will remain valid after approval.

Management can choose between:

- **Fixed to:** The pass will valid for set amount of time after the approval
- **Until:** The pass will valid until the set time of the day

6) Early Check-In

- Decide whether to allow visitor to use pass before appointment time

7) Edit Visitor Pass Validity after Creation :

- Decide whether to allow visitor to change visitor pass validity after creation.

Difference: Booking Window vs. Visitor Pass Requested

Booking Window
Booking window is the designated time range within which visitor passes are generally valid and prioritized.
Visitor Pass Requested
Visitor pass requested refers to the start & end times that the user (visitor) is asking for their pass to be valid.

8) If the requested pass validity :

- Start and end times are **before** the booking window starts.

Example:

- **Booking Window:** 12:00 PM to 2:00 PM
- **Visitor Pass Requested:** 6:00 AM to 7:00 AM

Options:

- **Allow:** Allow visitor pass to be created
- **Do not Allow:** Prohibit visitor pass to be created
- **Subject to approval:** Need approval before pass creation

9) If the requested pass validity :

- Start time is **before** the booking window start time.
- End time is **during** the booking window .

Example:

- **Booking Window:** 12:00 PM to 2:00 PM
- **Visitor Pass Requested:** 11:30 AM to 12:30 PM

Options:

- **Allow:** Allow visitor pass to be created
- **Allow but limit requested validity start time to the booking window start time:** Pass created is the booking window time. The pass is created from 12:00 PM to 12:30 PM.
- **Do not allow:** Prohibit visitor pass to be created
- **Subject to approval:** Need approval before creation

10) If the requested pass validity :

- Start time is **during** the booking window .
- End time is **after** the booking window end time.

Example:

- **Booking Window:** 12:00 PM to 2:00 PM
- **Visitor Pass Requested:** 1:30 PM to 2:30 PM

Options:

- **Allow:** Allow visitor pass to be created
- **Allow but limit requested validity end time to the booking window start time:** Pass created end time match the booking window end time. The pass is created from 1:30 PM to 2:00 PM.
- **Do not allow:** Prohibit visitor pass to be created
- **Subject to approval:** Need approval before creation

11) If the requested pass validity :

- Start and end times are **after** the booking window ends.

Example:

- **Booking Window:** 12:00 PM to 2:00 PM
- **Visitor Pass Requested:** 3:00 PM to 4:00 PM

Options:

- **Allow:** Allow visitor pass to be created
- **Do not allow:** Prohibit visitor pass to be created
- **Subject to approval:** Need approval before pass creation

The screenshot displays the 'Edit Visitor Pass Validity after Creation' configuration page. It features a sidebar on the left with navigation options like 'General Ledger', 'Properties', 'Suppliers', and 'Settings'. The main content area is divided into four sections, each illustrating a different scenario for the relationship between the requested validity period and the booking window. Each section includes a timeline diagram and a set of radio button options.

- Scenario 1:** 'If the requested validity start-time and end-time both fall before the booking window start-time'. The diagram shows a 'Requested Validity' box entirely to the left of a 'Booking Window' box. Options: Allow, Do not allow.
- Scenario 2:** 'If the requested validity start-time falls before the booking window start-time, and the requested validity end-time falls after the booking window start-time and the requested validity end-time falls before the booking window end-time'. The diagram shows the 'Requested Validity' box overlapping the start of the 'Booking Window' box. Options: Allow it, Do not allow, Subject to approval.
- Scenario 3:** 'If the requested validity start-time falls after the booking window start-time, and the requested validity start-time falls before the booking window end-time and the requested validity end-time falls after the booking window end-time'. The diagram shows the 'Requested Validity' box overlapping the end of the 'Booking Window' box. Options: Allow it, Allow it but limit the requested validity end-time to the booking window end-time, Do not allow, Subject to approval.
- Scenario 4:** 'If the requested validity start-time and end-time both fall after the booking window end-time'. The diagram shows the 'Requested Validity' box entirely to the right of the 'Booking Window' box. Options: Allow it, Do not allow, Subject to approval.

On the right side of the screenshot, there is a user profile for 'Yong Shuet Li' and a list of 'Limit' settings, each with 'Edit' and 'Delete' buttons.

12) If the requested pass validity :

- Start time is **before** the booking window start time.
- End time is **after** the booking window end time.

Example:

- **Booking Window:** 12:00 PM to 2:00 PM
- **Visitor Pass Requested:** 11:00 AM to 3:00 PM

Options:

- **Allow:** Allow visitor pass to be created
- **Allow but limit the request validity start-time and end time to the respective booking window accordingly:** Pass created is the booking window time. The pass is valid from 12:00 PM to 2:00 PM.
- **Do not allow:** Prohibit visitor pass to be created
- **Subject to approval:** Need approval before pass creation

13) Grace Period

- Allow a number of minutes grace period after a visitor pass has expired , during which the visitor may still be granted access through the access controls.

14) Expired Visitor Pass Extension

- For visitors without an approved Contractor Service Permit or Facility Booking
- Allow a number of minutes extension if requested within a number of minutes after validity end-time.

15) QR Key Time Limit

- Use Dynamic QR code and refresh it every few seconds or use static QR code

16) QR Key Usage Limit

- Limit the number of times the QR key is used

17) Check In Requirements for Pre-Registered Visitors

- Identity verification is needed or not at guard house upon arrival
- **If needed** Visitor let guard scan QR code provided for express identity verification process
- **If not needed,** Visitor scan QR key provided at QR readers and access to premise directly

18) SuperPASS-Door Access Control

- Decide which door this visitor type can use

The screenshot displays the 'Visitors' settings page in the VYROX system. The left sidebar contains navigation menus for 'General Ledger', 'Properties', 'Suppliers', 'Settings', and 'Visitors'. The main content area is titled 'Requested Validity' and includes a visual timeline showing 'OH', 'Requested Validity', 'Booking Window', and '24H'. Below this, there are several configuration sections: 'Requested Validity' (radio buttons for 'Allow it', 'Allow it but limit...', 'Do not allow', 'Subject to approval'), 'Grace Period' (radio buttons for 'Allow a []-minute grace period...' and 'Do not allow'), 'Expired Visitor Pass Extension' (radio buttons for 'Do not allow' and 'Allow for a []-minute extension...'), 'QR Key Time Limit' (radio buttons for 'Use dynamic QR code...' and 'Use static QR code'), 'QR Key Usage Limit' (radio buttons for 'Maximum [] times' and 'Unlimited'), 'Check-in' (radio buttons for 'Visitor identity verification at the guard house...' and 'Visitor identity verification is not needed'), 'SuperPASS-Door Access Control' (radio buttons for 'Original VYROX AIoT Devices' and 'Compatible Third-Party Devices'), and 'SuperPASS-Lift Access Control' (checkboxes for 'Office IN', 'Warehouse IN', 'In1', 'In2', 'Out1', 'Out2'). The right sidebar shows a 'New Visitor Type' button and a list of existing visitor types, each with 'Edit' and 'Delete' buttons.

19) SuperPASS-Lift Access Control

- Decide which lift this visitor type can use

20) UltraPASS-Face Access Control

- Decide outside or Inside Face Access

22) UltraPASS-Vehicle Access Control

- Decide whether to use VYROX BionicEYE for Vehicle Access

22) Prerequisite Requirements

- Require approved contractor service permit or Facility booking.
- Both permit and booking is selected from dropdown on form , upon new visitor registration

23) Long Term Visitor Pass Renewal

Simplifies the process for visitors who frequently need access, such as renovators or event staff, by allowing them to renew their existing visitor pass for future check-ins.

Self-Renewal :

- Visitors can click the [Renew] button on their Visitor Pass Page to renew their pass.
- Once renewed, the pass will retain its settings and show the status “Pending Check-In.”

How It Works

a. If option is Enabled:

- **Seamless Check-In :** Visitors do not need to register again at guardhouses or security checkpoints during the validity period of their contractor service permit or facility booking.

b. If option is Disabled:

- **Manual Check-In:** Visitors must register at guardhouses or checkpoints for every check-in.
- Security officers need to manually click [Renew] in the guard portal for each visitor, even if permits or bookings are still valid.

Difference: Renewal vs. Reapplying

Renewal	Reapplying
Updates the existing visitor pass.	Creates a brand-new visitor pass.
Consolidates all visitor tracking information into a single pass	Uses previous visitor details but starts fresh.

2.4. Add New Visitor

Go **Visitor > Select a Property > OK > Fill in details for New Visitor > Submit**

Details include:

1. Visitor Name
2. Identity Document (Driving License or MyKad)
3. Phone number
4. Vehicle Plate
5. Visitor Type (Such as : Visitor , Delivery , Contractor)
6. Visitor Valid time
7. Visitor Driving license and IC picture

Both name and IC can be filled in automatically using the scan feature .

2.5. Share QR code to Visitor

After new visitor registration is made , go to **more options > Make QR-Key**

The screenshot shows the 'Visitors > Registrations' page. On the left is a sidebar with navigation icons and sections like 'Operation Insights', 'Security Monitor', 'Customer Accounts', 'Cash Book', 'General Ledger', 'Properties', 'Suppliers', 'Settings', 'Physical Access Control', and 'AIoT Devices'. The main area displays a table of registrations with columns: No., Appointment, Visitor Pass No., Visiting Property, Visitor, Mobile No., Vehicle Plate No., Valid Until, Checked By, and Status. A context menu is open over the first row (No. 550), showing options: Edit, Check-In, Make QR-Key (highlighted with a red box), View Visitor Pass, Print Visitor Ticket, Cancel Visitor Pass, and Delete. A popup window titled 'Use the QR Code below to gain access through gates, doors, and lifts.' is centered over the table, displaying a QR code and the text 'Expire in 9 seconds'. Below the QR code, it states: 'This QR Code is dynamic and changes over time for enhanced security. Please do not take a screenshot and instead share the entire Visitor Pass.'

With the QR-key Guards will go to **SUPERGUARD > Scan QR code/click here > Visitor > Scan QR > Check-In**

This screenshot shows the same 'Visitors > Registrations' page. The 'SuperGUARD' button in the top right is highlighted with a red box. A popup window titled 'SuperGUARD App' is displayed in the foreground. The popup contains the text: 'Scan the QR code below to log in on another smart device, or click here to open it in a new tab within this internet browser.' Below the text is a large QR code. The background table and sidebar are dimmed.
